## 1. INTENT

This monthly environmental monitoring report is a requirement under section 66(6) of the NSW Protection of the Environment Operations Act 1997 (POEO Act), in which holders of an environment protection licence make their pollution monitoring data publicly available. This report is intended to keep the community, stakeholders, and regulators informed of the Hera mine's environmental performance and to maintain a transparent and accountable reporting system.

## 2. SCOPE

This report covers all of Hera's environmental monitoring conditions for July 2021. These conditions, where applicable, are measured against Hera's Environmental Protection Licence (EPL), development consent conditions and Australian Standards to determine Hera's compliance.

These conditions include;

- Weather Conditions
- Surface Water Monitoring results
- Ground Water Monitoring results
- Noise Monitoring results
- Blasting monitoring results
- Air Quality Monitoring results
- Gold Room Stack Monitoring
- Concentrate Transport

## 3. DEFINITIONS

Insoluble Solids – the insoluble portion of the dust deposition

Total Lead – Including dissolved lead in the liquid portion and the lead particulates in the filter paper following laboratory analysis

g/m<sup>2</sup>/month – grams per square meter per month

dB (L) – decibel (linear maximum)

dB LAeq (15 minute) – Decibel (linear weighted average over 15 minutes)

CN Free – Free Cyanide (hydrogen cyanide and cyanide ions in solution)

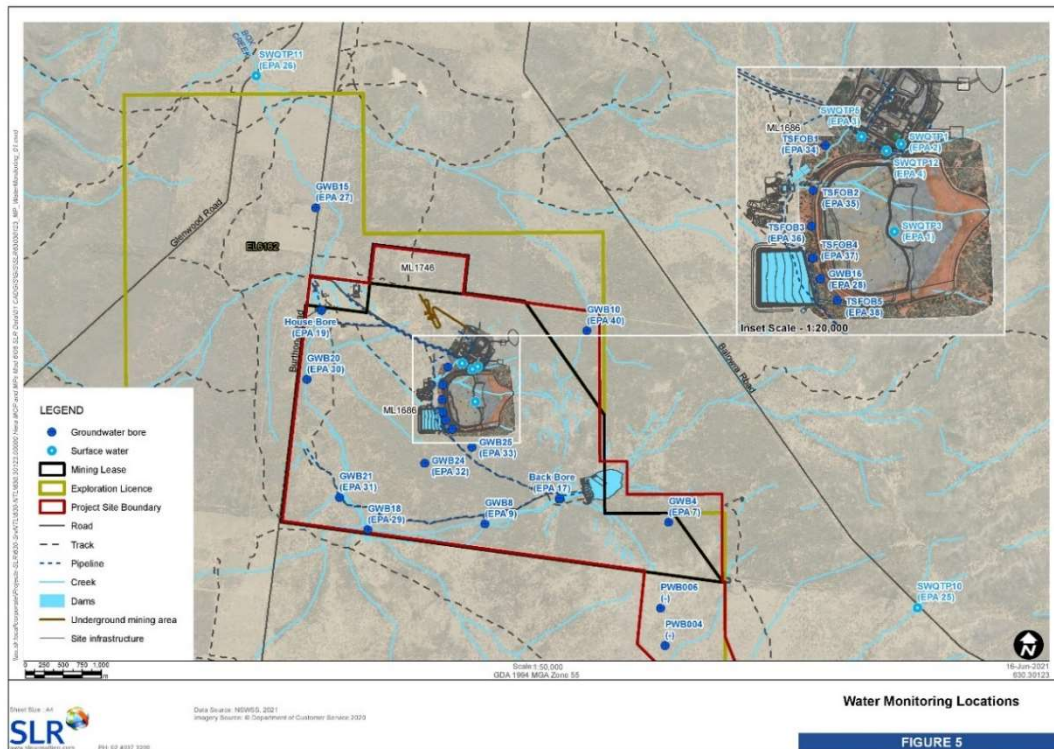

CN WAD – Weak Acid Dissociable Cyanide (includes cyanide species liberated at moderate pH of 4.5)

**5. MONITORING RESULTS**

**5.1. WEATHER**

The meteorology monitoring data is acquired through Hera’s weather station located on the Hera Mine site, approx. 4km south of the town of Nymagee, NSW, Refer **Figure 1**.

Meteorological monitoring is conducted on a continuous basis. **Table 1** shows a summary of the data collected by the weather station this month. **Figure 3** is the wind rose for the month of July.

**5.2. WATER**

Water monitoring involves collecting water samples from several locations around site. The water samples are submitted to a NATA accredited laboratory for physical and chemical analysis. Analysis of pH and electrical conductivity are obtained in the field using a handheld monitor.

**Surface Water Monitoring**

Hera has 6 licence points associated with surface water. Four of these points are located within the mining lease and two are located off the mining lease, with one upstream and another downstream of the lease, refer **Figure 2**.

**Table 2** shows a summary of the surface water quality results for July 2021 for licence points 1 and 2. Licence points 3, 4, 25 and 26 did not discharge during July. No exceedances were recorded for the month.

**Table 2** Surface Water Monitoring Results

Monitoring point	WAD Cyanide (mg/L)			
	Minimum	Average	Maximum	EPL 90 <sup>th</sup> percentile concentration criteria
TSF Thickener discharge (EPA Point 1)	0	0	0	20
Process Water Dam (EPA Point 2)	0	0.52	8	20

**Groundwater Monitoring**

Hera has 17 licence points associated with groundwater. These points are located around the Project Area, (refer **Figure 2**) and are a combination of observation bores, productions bores and piezometers. Monitoring is conducted quarterly and was completed during June with results reported in the June Monthly report. The next round of groundwater monitoring is scheduled to be completed in September.

**5.3. NOISE**

The Company has four licenced monitoring points (R1, R2, R3 and R4) located along the Burthong Road (**Figure 1**). The locations are strategically placed near the Hera Mine’s nearest neighbours. R1 and R2 are measured from the same point as both neighbours are in very close proximity to each other.

A noise assessment was carried out on the 11<sup>th</sup> and 12<sup>th</sup> of May 2021. Results from monitoring were reported in the June monthly report. The next annual noise monitoring is due to be undertaken in May 2022.

Hera holds a Noise and Blast agreement with the Landholder of R3. The agreement has been provided to the EPA and the Department of Planning, Industry and Environment (DPIE).

**5.4. BLAST MONITORING**

The blast monitor is located adjacent to the dwelling on the nearest neighbour’s property (**Figure 1**).

Hera conducted a total of 47 blasts this month with the blast schedule undertaken at the beginning and end of the shift change, which is 6:30am and 6:30pm. The characteristics of each blast are presented in **Table 3**. No exceedances were recorded for the month.

Hera holds a Noise and Blast agreement with the Landholder of R3. The agreement has been provided to the EPA and DPIE.

### 5.6. GOLD ROOM STACK MONITORING

Hera has two licenced gold room stack monitoring points (**Figure 1**).

Gold Room stack monitoring is conducted on an annual basis. Annual monitoring was conducted on 1 September 2020 and was included in the September 2020 monthly report.

The next annual monitoring is due to be undertaken in October 2021.

### 5.7. CONCENTRATE TRANSPORT

The Company is licenced to transport 60,000 tonnes of lead/zinc concentrate from site during daylight hours only. Hera is limited to eight truck movements per day averaged over a calendar month (two truck movements is defined as entering and leaving the site). A summary of concentrate haulage operations is presented in **Table 5**.
